

# Campus Lockdown Solutions

## LOCAL LOCKDOWN & PRIVACY

A local Lockdown may be performed by holding the exit handle for three seconds. Locksets can not be put into this mode if the door is in an open position.

A local Lockdown\Privacy can be configured to release by either standard egress or with a "Lockdown-Release" credential.

## VICINITY LOCKDOWN, OPTION

A local Lockdown may also be activated by clicking the button on an active BLE fob. Fobs can be issued to individual users and can control one or more doors within range (100 feet max). Locksets can not be put into this mode if the door is open.

A local Lockdown can be configured to be released in several ways.

## LOCKDOWN—NETWORKED SYSTEM (Q4)

A Global\Centralized Lockdown can be initiated from the software, transmitting this command to the locksets through BLE gateways (our door controllers also include a gateway!).

A local Lockdown can be configured to be released in several ways.

*Proxess locks can also be activated by presenting a lockdown card to the outside of the lock/reader or be part of a traditional hard-wired access system.*

Features that compete with access systems at a price that competes with Grade 1 locks.

- All-weather rated
- Grade 1
- UL
